ARROW SERIES

As a straight type aluminum/carbon arrow shaft,

TRIPLE NEO AL/CARBON SHAFT is featuring a core of 7075 pure grade aluminum, wound with outer layer of high density U/D carbon.

The aluminum tube provides superior resistance to crushing, bending and splitting.

TRIPLE NEO is produced to be as thin and light as possible to provide maximum performance, durability and minimum wind drift. The outer U/D carbon level has been upgraded with new fresh and modern graphic design.

XTEER CARBON ARROW

XTEER CARBON ARROW is full carbon shaft with fit 5mm over nocks, points and EP-23 vanes. Excellent value as part of a startup kit, it features strong stems, strong nocks and low wind drift with the smaller 5mm diameter. This arrow is highly recommendable for target practice or leisure where spine is not critical.

COMPLETE ARROW INCLUDES

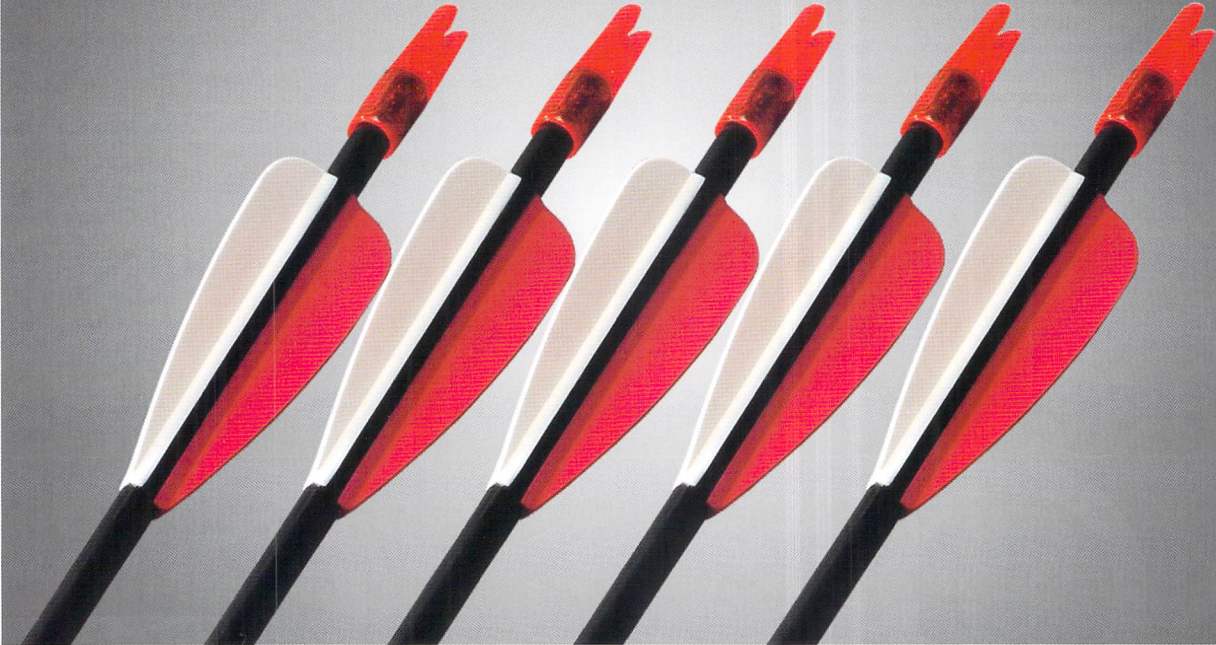

- ▶ 5mm durable steel point (Chrome plated)
- ▶ 5mm conventional glue-on nock
- ▶ EP-23 vanes (size: 2 3/8")

SPECIFICATION

▶ SPINE	1150
▶ DIAMETER	5 mm
▶ ARROW LENGTH	28.5"

NOCKED, FLETCHED, TIPPED, READY TO SHOOT,
EXTRAORDINARY DURABILITY FOR EXTENDED USE.

TRIPLE ALUMINUM CARBON ARROW SELECTION CHART

GOLDEN TIPS FOR SELECTING THE CORRECT TARGET SHAFT SIZE

1. Arrow Size Selection

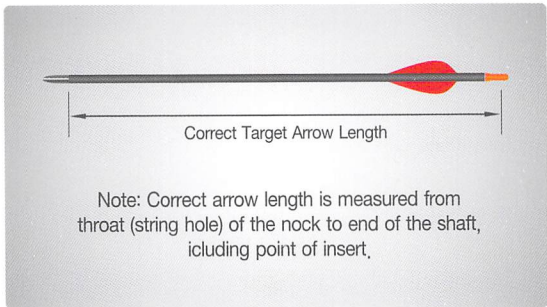

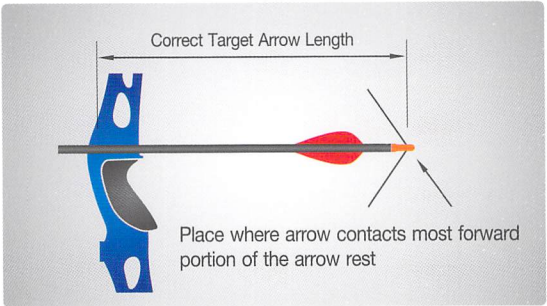

in order to select the correct shaft, you must know your exact arrow length and the draw weight of your bow at your draw length.

2. Correct Arrow Length

An arrow should be long enough to extend at least 1 or 1 and 1/4" the point where it sits on the arrow rest when the archer is at his/her full draw. For the beginner, 1 and 1/2" beyond the rest is highly recommendable because beginners usually increase their draw length as they grow stronger.

3. Three Arrow Flight Problems

- Porpoising : vertical oscillation of arrow
- Fishtailing: Horizontal oscillation of arrow
- Other problems caused by lack of tuning for clearance

TARGET FIELD 3 - D SHAFT SIZE SELECTION CHART										
Bow Weight \ Arrow Size		23"	24"	25"	26"	27"	28"	29"	30"	31"
