2016 ARCHERY CATALOG

LIMBSAVER Legacy

FROM THE BEGINNING

From the very beginning, here at LimbSaver, we have been committed to engineering the most advanced products utilizing the most state-of-the-art technology.

Over the years we have become trail-blazers in the industry, producing the most effective noise and vibration-dampening technology.

AMERICAN MADE

Virtually every product we make is made right here in Shelton, WA, and for two decades we have been making the highest quality and best performing archery and firearms products in the world.

Taking pride in our work, we have always employed teams of industry experts and engineers that design, test, and perfect every single product, ensuring that what is produced is the best in the world.

INDUSTRY LEADERS

Always pursuing advancement, we are constantly researching, testing, and evaluating technologies, materials, and designs to ensure that we produce the most effective sound and vibration-dampening products possible.

We believe that the best products are born from hard work and determination...

In fact, many well-known companies from around the world come to us to have their products tested, evaluated, and improved by our engineers.

BEST VALUE

Because we own every aspect of the business - research and development to manufacturing - we are able to control development and production cost to a degree that most of our competitors (many of whom source product and labor overseas) cannot.

LIMBSAVER PARTNERS AND FRIENDS 46-55

"We have a **NO COMPROMISE** approach to our development of products. If it isn't absolutely the best, it doesn't go to market until it is."

STEVE SIMS

LIMBSAVER IS A COMPANY BUILT UPON HARD WORK AND UNCEASING COMMITMENT. LIMBSAVER EMPLOYEES TAKE EXTREME CARE TO PRODUCE THE BEST PRODUCTS AND TO PROVIDE TOP-TIER CUSTOMER SERVICE.

INDUSTRY-LEADING Technology

no-slip

Specific products are designed with No-Slip surface. For instance, when using our slings, it is important that the sling **stays put** on your shoulder so you don't have to fuss with it and constantly re-adjust it.

navcom®

[Noise and Vibration Control Material]

This one material takes many forms. The durometer, or hardness, of the material is adapted to suit different applications. That's why, for example, you can feel a distinct difference between the hardness of our slings – which contour your shoulder and relieve stress from weight, and our S-Coil Stabilizers – which absorb and dissipate energy and vibration.

When designing our Broadband LimbSavers, we purposefully used two different durometers of NAVCOM® to dissipate a wide range of vibration frequencies. It's not magic, it's science... really, really good science.

noise reducing

One of the hallmarks of our products is the amazing ability to **silence and deaden** archery gear. Taking ordinary, off-the-shelf bows and turning them into silent and deadly tools is the mission of our archery products.

With something as important as noise and vibration dampening, you can trust that LimbSaver has got you covered.

all weather

Our products are built to be used outdoors in harsh environments. Since the beginning, we have been researching, developing, and improving upon materials we use to build our products to make them more **durable and longer lasting**.

ultra-light

Most of our products fall into what would be considered a lightweight category, but we have designed a select number of products to be ultra-lightweight. These products are engineered with the hunters in mind who **count every ounce** that goes on their bow and use the bare minimum to keep it light and portable.

easy install

When we create our products, we have our customers in mind. We want to make the best-functioning products that we can. Part of that functionality is ease of installation. We realize that not everyone has a garage full of archery-specific tools or expertise. That's why we strive to create products that are **quick and simple** to install.

**PROUDLY
MADE IN USA**

We believe in being a self-sufficient, American-made company. 99% of LimbSaver products are proudly engineered and made in the United States. The quality of our work is of utmost importance to us. We are proud to be a company that is positively affecting our community and helping to rebuild the American economy.

300X Pro Series 36"

SIGMA CAM

Our **Sigma Cams** provide the smoothest draw, extra-generous valley, and rock-solid back wall that hunters and sportsmen have been looking for in a bow. Our proprietary **Dual Track System** virtually eliminates cam lean, wobble, and nock travel. This is the bow you can trust to not let you down when the shot counts.

The **Sigma Cam** and **Dual Track System** allow the string to be perfectly centered with the riser, which makes the LimbSaver 300X is extremely straight-shooting. This bow platform gives you an accurate, predictable shot, even at long distances.

36 INCH ADVANCED RISER

The 300X **36 inch Advanced Riser** is a lightweight, super-rigid riser that is engineered to last a lifetime. It gives you a vibration-free, forgiving shot.

The **36 inch axle-to-axle** riser is a relentless, rock-solid design that offers pinnacle performance.

The shoot-off-the-riser grip is optimized for torque-free accuracy.

POSI-LOCK

The patented **7-position Posi-Lock Poundage System** allows for draw poundage adjustment without affecting bow tuning parameters (brace height, axle-to-axle, timing, and draw length). This repeatable system allows the shooter to change the poundage in the field without re-tuning the bow.

You will notice that the 300X is very forgiving, consistent, and reliable. It is easy to tune and stays in tune unlike other bows.

LIMBS

300x limbs are designed to flex on both sides of the fulcrum allowing for maximum working area and minimum mass weight. The limbs are bolted to the riser for a rock solid shooting platform.

ATLAS Bow Hanger

MAX ARTICULATION

The all-new Atlas Bow Hanger is strong and allows for highly customized placement.

Thanks to its unique 180 + degree hinged auger base, you can set your hanger with more precision. When you have your Atlas Bow Hanger arm exactly how you want it, you can easily push the entire setup out of the way directly from the base of the tree without affecting the position of the other joints.

UNMATCHED QUALITY

The hanging platform is wrapped in LimbSaver's NAVCOM® (Noise and Vibration Control Material). This makes sure you stay silent when you go to place or remove your bow.

No more needing to over-tighten or back out your bow hanger when installing it in a tree in order to get the bow hook just right to hang your bow.

The 360 degree hanger disk on the Atlas Bow Hanger gives you perfect hanging position every time.

SILENT Quiver

QUIET & LIGHTWEIGHT

When LimbSaver's design and engineering team went to the drawing boards for a new quiver they had three ultimate goals in mind: silence, low profile, and ease of use.

The hood and double grippers are made out of NAVCOM® (Noise and Vibration Control Material) which effectively absorbs a wide range of vibration frequencies and noise. The flexible properties prevent the loud tapping noise while removing or inserting an arrow

Slipping the quiver on and off your bow is no sweat with the quiet, quick disconnect system operated by an easy-to-access thumb release.

UP TO 70% QUIETER

PREMIUM MATERIALS

The positionable, durable double grippers securely hold 5 arrows and fit a wide spectrum of shaft sizes (between .240"-.360" diameter).

The hood design fits most fixed and expandable broadheads and does not use foam (no broadhead dulling).

The slim design has a total depth of only 2.3 inches and width of 5.7 inches. It utilizes a rear-mounting system which allows the the quiver to sit incredibly close to the riser, virtually eliminating side bow torque.

and secure fit

The Silent Quiver is the quietest and most functional quiver I've ever used. No more rattling arrows and the quick release mount is dead quiet. It mounts tight to your riser preventing torque issues that can happen with other quivers. The NAVCOM® hood not only protects your broadheads but absorbs vibration unlike hard plastic hoods. Just when you think it couldn't get any better, it's proudly made in the USA.

JUSTIN OLK
DREAMPOINT OUTDOORS

CUSTOMER feedback

I love that the Silent Quiver is so easy and quiet to take off and put back on my bow. It makes hunting a lot easier because it won't scare a deer away.

HUNTING Stabilizers

ULTIMATE VIBRATION REDUCTION

The industry's top stabilizers cannot compare to LimbSaver bow stabilizers when it comes to performance and quality.

LimbSaver stabilizers have been engineered to knock out noise and vibration by using proven-effective forms, weights, and materials specifically designed to counteract resonant frequencies. This shortens the settling time of your bow, making your shooting cycle more comfortable and less tiresome on your body.

LimbSaver stabilizers are designed with optimum versatility and customization in mind. Most have options for extension or additional accessories.

REDUCES UP TO 50% OF FELT VIBRATION

 WITHOUT LIMBSAVER STABILIZER

 WITH LIMBSAVER STABILIZER

*Test performed with LS Hunter Stabilizer against bare bow

PREMIUM MATERIALS

NAVCOM® (Noise and Vibration Control Material) is incorporated into every LimbSaver stabilizer. This material effectively absorbs a wide range of vibration frequencies to dissipate energy, vibration, hand shock, and noise. The shooter will notice a dramatically smoother and quieter shot when using our products.

The structural components in LimbSaver stabilizers are crafted from high modulus carbon fiber, 6061 machined aircraft aluminum, and high carbon steel. Because of the high-end materials being used, LimbSaver stabilizers are more durable and longer lasting than others on the market.

When I use the AWS, my bow is completely dead in hand. It's a killer product.

Brad Miller
Country Boys Outdoors

CUSTOMER feedback

The AWS 9.5 inch has very high craftsmanship, you can tell when you pick it up. It crushes vibration; I feel almost nothing in my hand any more after I put this on my bow. The length is nice as well since you can balance the bow better than with shorter stabilizers.

TARGET Stabilizers

QUALITY STABILIZING

Vibration dampening is a key element of LimbSaver's target shooting products. NAVCOM® is utilized to cut out unwanted vibration and wobble.

LS Target Stabilizers are filled with vibration dampening particles that take out the buzz of each shot, resulting in a smooth finish. Stabilizer Dampeners and Stabilizer Enhancers add an increased level of vibration control to any target stabilizer.

LimbSaver Target Stabilizers help increase accuracy and consistency by steadying the shot and by shortening settling time.

PREMIUM MATERIALS

NAVCOM® (Noise and Vibration Control Material) is incorporated into every LimbSaver stabilizer. This material effectively absorbs a wide range of vibration frequencies to dissipate energy, vibration, hand shock, and noise. The shooter will notice a dramatically smoother and quieter shot when using our products.

The structural materials used are high modulus carbon fiber and 6061 machined aircraft aluminum. Because of the high-end materials being used, LimbSaver stabilizers are more durable and reliable than others on the market.

BLACKOUT

Internal vibration dampening makes these the most **vibration-free** target stabilizers on the market. High modulus, unidirectional 5/8 inch diameter carbon fiber **reduces stabilizer whip** for better accuracy and stability. The shooter will notice **quicker settling time**.

The Blackout is made complete with a **Broadband Stabilizer Enhancer** which adds another level of vibration suppression.

- High-end carbon tubing has vibration-dampening technology built inside
- Extra rigid carbon fiber for reduced stabilizer whip and shortens settling time
- Available in eight sizes ranging from 8" to 34" lengths
- Slimmer 5/8 inch outside diameter carbon is more stable when shooting in the wind
- 5/16"-24 accessory mount

LS TARGET STABILIZERS

LS Target Stabilizers are made out of high-end, sturdy 7/8 inch diameter carbon fiber tubing that is filled with NAVCOM® particles. Each is factory-tuned for optimum vibration control. This truly is a superior product that will give you a noticeably smoother and quieter shot.

- High-end carbon tubing has vibration-dampening technology built inside
- Boosts accuracy and smoothness of shots
- Available in eight sizes ranging from 8" to 34" lengths
- 7/8 inch outside diameter carbon
- 5/16"-24 accessory mount

LIMB & RISER Dampeners

ULTIMATE VIBRATION REDUCTION

Don't be fooled by competitors who claim higher vibration reduction. Our designs have consistently been proven to outperform other brands of limb dampeners. Since inventing the original limb dampener, LimbSaver has been the forerunner of progress in the industry.

The ultimate goal of limb and riser dampeners is to reduce vibration energy to ensure every shot will be quieter and smoother with less wear on you and your bow.

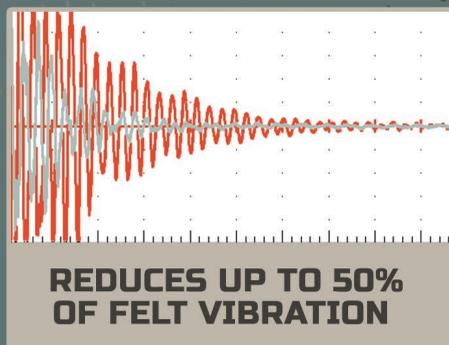

LimbSaver uses specialized NAVCOM® (Noise and Vibration Control Material) in varying durometers and configurations to isolate a wide range of vibration frequencies.

By addressing the vibration frequencies that cause audible noise, LimbSaver dampeners will reduce the noise of your shot, helping a hunter go undetected and decreasing the chances of game jumping the shot.

Abundant practice makes perfect. It also can cause the shooter discomfort. Compound bows generate an incredible amount of vibration that is transferred into the archer's hand and arm. This repeated exposure to shock can be damaging, both to the shooter and their equipment.

LimbSaver's dampeners target the vibration frequencies that are felt during and after the shot. The result is a smoother, more uniform shooting experience.

TWISTLOX LIMB DAMPENERS

I love the SuperQuad limb dampeners. As soon as I put them in my bow the vibration is simply gone, this in turn makes my bow more quiet and gives me the confidence to make the shot when an opportunity presents itself.

**WARREN HOLDER
RAISED HUNTING**

CUSTOMER feedback

I was a little skeptical at first, but when I added both the Broadband Split LimbSavers and the Everlast String Leeches my bow went from having a lot of vibration and noise to almost Ninja quiet. That is the advantage I'll have come hunting season.

Gil V.
California, USA

PRODUCTS THAT WORK **LIMBSAVER®**

NEW

TWISTLOX

A result of extensive development & testing, the new TwistLox limb dampeners noticeably **dampen noise and vibration** when shooting your compound bow.

Installation is **easier than ever!** Simply slide in, twist, and lock up for a snug and secure fit. They can be installed in **two orientations** for wide or narrow-spaced limb gaps, and can be positioned to the shooter's preference, using two or more TwistLox dampeners per limb. Mix, match, and color coordinate.

- Dramatically cuts out limb vibration and noise for a smooth, quiet shot
- Quick and easy installation on most standard and wide-spaced split limb bows by installing in two different orientations

TOP PERFORMANCE

Much of the noise from bows comes from the intense string oscillation. Reduce string oscillation, and you'll immediately have a twang-free, quieter bow with less buzz.

Just as a guitar string makes noise as it oscillates, so does a bow string. And while music is beautiful, you do not want to make music with your bow. LimbSaver's string and cable leeches address the vibration, or oscillation, that happens during and immediately following the shot. You will notice less noise and a smoother shot.

GREATLY REDUCES STRING OSCILLATION

ACCURATE Rests & Sights

RELIABLE & QUIET

LimbSaver rests are designed to be smooth and reliable.

The twin-bearing system makes the LimbSaver Fall-Away Arrow Rest very smooth and quiet. The lightweight composite arm combined with the drop pad deadens the fall impact noise.

LimbSaver's NAVCOM® (Noise and Vibration Control Material) Arrow Holder works hand-in-hand with the Fall-Away Arrow Rest to silence and align the arrow while at rest and through the beginning of the draw cycle. The NAVCOM® material drop pad cushions and silences the fall of the Fall Away Arrow Rest Arm.

UP TO 70% QUIETER

EXTRA BRIGHT

Prism-Lite Sights use extra-bright fiber optics and unique light collection housing to create vividly bright pins. This makes it especially easy to line up your target.

When shooting in very dim lighting, use the optional L.E.D. Light System for added light.

BOW & X BOW Slings

TOP COMFORT

When you are carrying your bow or crossbow to and from your treestand or while stalking, you want absolute control over your gear and you don't want to kill your shoulder and back before even getting there - that's where Kodiak Slings come in.

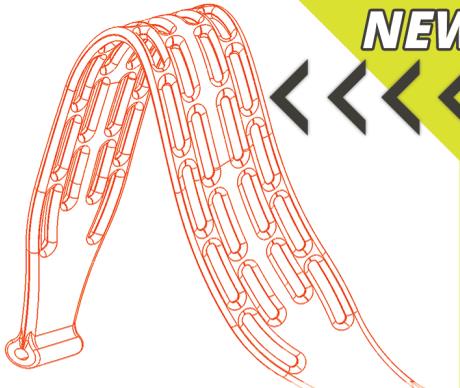

Kodiak Slings are designed with a comfortable shape made out of NAVCOM® (Noise and Vibration Control Material) that flexes to fit the contoured shapes of your back and shoulders. It evenly distributes the weight of your bow or crossbow across your shoulder and back for increased comfort.

PREMIUM MATERIALS

- Handle grips are designed to be comfortable and ergonomic.
- Sling length is fully adjustable to fit archers and hunters both large and small.

Kodiak-Lite Bow Slings are assembled with high quality buckles that make attaching and detaching the sling a snap.

Kodiak-Lite Crossbow Slings are designed with LimbSaver's new ultra-strength Titan QuickLock attachment brackets for easy on/off.

KODIAK-AIR BOW SLING

Control. Comfort. Utility.

The Kodiak-Air is the **latest evolution** of the LimbSaver bow sling. Being the **pinnacle of years of technological research and development**, this sling is the most comfortable way to carry your bow.

- Comfort-Flex design follows the contours of your shoulder and back to minimize pressure points
- All weather, no slip material keeps bow in place on your shoulder
- Easy on/off with durable quick-connect clips

TECHNOLOGY

1/ COMFORT

The new design with **Air-Web Pattern** will keep you comfortable and cool as it **flexes and molds** to the shape of your body for **unprecedented comfort**.

LN. | WT.
ADJUST. | 6.7 OZ

2/ NO-SLIP

The **no-slip NAVCOM® material** keeps your bow secure while you hike, ride, scramble, or climb.

3/ ALL-WEATHER

The durable **NAVCOM® material** is suited for use in all weather conditions - from summer heat (with breathable Air-Web Pattern), to rain, to freezing temperatures.

4/ ADJUSTABLE

The **adjustable length** allows you to carry your bow with the sling on one shoulder or across your body.

The **high strength, quick-connect clips** allow for the sling to be quietly installed and removed from your bow.

Quick-connect clips make installation easy

KODIAK-LITE BOW SLING

This bow sling is fully adjustable in length and is secured to your bow by two durable quick-release buckles. You can comfortably carry your bow with the sling on one shoulder or cross-body. The anti-slip material and hand grip make this sling stand out from others on the market.

- Contour design with NAVCOM® material keeps your sling in place while providing cushion and weight distribution
- The sling is fully adjustable
- Easy on/off with durable quick-connect clips

ECOSAFE Bow & Crossbow Care

WORRY-FREE PERFORMANCE

EcoSafe Bow and Crossbow Care products help to keep your gear in top shape for optimum performance.

The String Wax and Rail Lube help to keep your strings from wearing out. The Archery Oil Pen will help keep your bolts and metal gear from rusting.

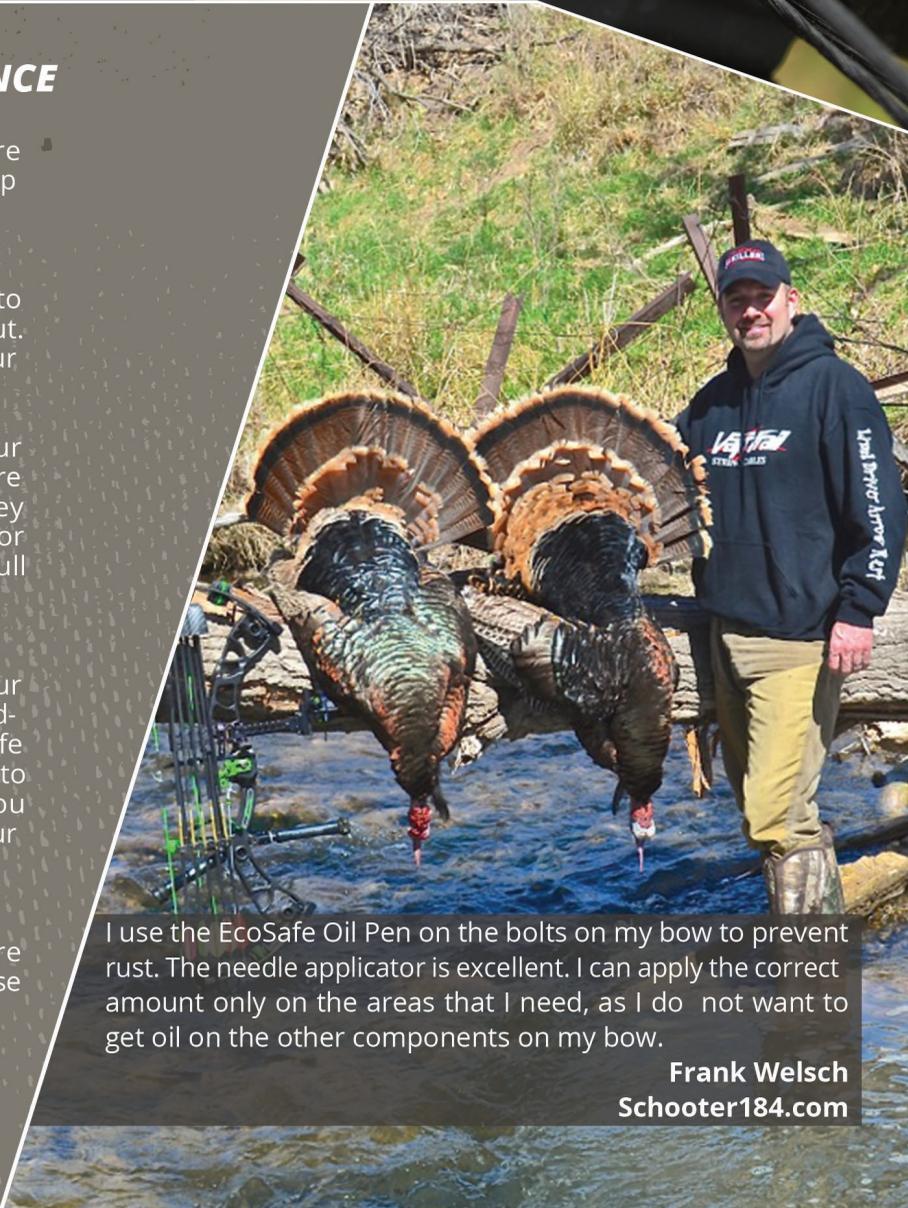

Weatherlock® technology in our EcoSafe products seals out moisture and helps prevent corrosion. They contain no detergents, silicones, or additives that could damage or dull your equipment.

You won't find warning labels on our EcoSafe Bow and Crossbow Care Products. Unlike other brands, EcoSafe products are all-natural and safe to use. You don't have to worry if you have children or if you get any on your skin.

Our oils, waxes, and lubes are scent-free, so you can feel free to use on your hunting gear.

I use the EcoSafe Oil Pen on the bolts on my bow to prevent rust. The needle applicator is excellent. I can apply the correct amount only on the areas that I need, as I do not want to get oil on the other components on my bow.

Frank Welsch
Schooter184.com

ECOSAFE STRING WAX

This specially formulated wax contains WeatherLock® technology to help remove moisture, reduce friction, and keep your strings in excellent shape.

Safe to use, it's non-toxic, non-flammable, and odorless.

8003 String Wax

CUSTOMER
feedback

Don't underestimate the importance of string maintenance. When this simple task is neglected, it leads to a much shorter string life. LimbSaver String Wax is just what the doctor ordered.

CROSSBOW Suppressors

ULTIMATE VIBRATION REDUCTION

A major complaint of crossbow hunters is the horrendous amount of noise that results from the shot.

LimbSaver's crossbow suppression accessories reduce vibration energy to ensure every shot will be quieter and smoother with less wear on your crossbow.

LimbSaver uses specialized NAVCOM® (Noise and Vibration Control Material) in varying durometers and configurations to isolate a wide range of vibration frequencies.

By addressing the vibration frequencies that cause audible noise, LimbSaver crossbow suppressors will reduce the noise of your shot, helping a hunter go undetected and decreasing the chances of game jumping the shot.

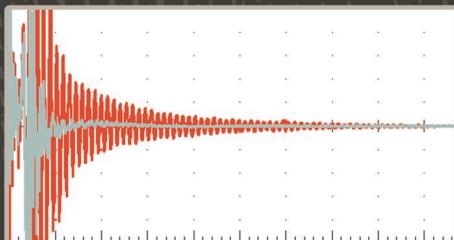

Crossbows generate an incredible amount of vibration that is transferred into the shooter's hand and arm. LimbSaver suppressors target the vibration frequencies that are felt during and after the shot. The result is a smoother, more uniform shooting experience.

NEW

TWISTLOX

These brand new limb suppressors **for split limb crossbows** securely snap between your limbs without the use of a plastic bracket. Use two or more TwistLox suppressors per limb. No tools required for installation!

They are made **durable** to withstand the extreme torque and power from high powered crossbows. They are configured and tuned to specifically **suppress** the magnitude of vibration from crossbows.

- Greatly reduces vibration from your limbs as well as unwanted noise, giving you a noticeably smoother and quieter shot
- Secures in between your limbs in two orientations

CROSSBOW SUPPRESSION KITS

These LimbSaver kits attack vibration and noise at the source.

- A.** The **TwistLox Suppressors** (split-limb) or **Crossbow Broadbands** (solid-limb) dampen limb vibration.
- B.** The new **Cable Decelerator** fits snugly in most cable slots and decelerates the cable. **This piece only works on compound crossbows with cable slots on the stock.*
- C.** The **Stirrup Dampeners** attach to almost any foot stirrup to quiet the extra clatter.
- D.** Also in the kit is the new **Bolt Retention Dampener** that helps to quiet the bolt retaining spring.
- E.** **Super String Leeches** complete the Crossbow Silencing Kit and reduce string noise. A bow press is required for leech installation.

- Each kit includes 5 outstanding products that are designed to target noise and vibration on different parts of the crossbow
- Get a smoother, quieter shot
- Parts are built to withstand high energy cycles of crossbows
