## About Us

45 years ago Mel Stanislawsk invented the triggerless backtension release aid. Ever since, his namesake company has been leading the way in release aid performance and technology.

This year we've broadened the use of our patented Trainer Lock™ feature which now comes standard on our entire lineup.

We've also expanded our Heavy Metal handle offering which now includes MOREX, SX3, Element and shootoff! models. This year's Heavy Metal models come in our new Black Magic finish (featured in the image to the right).

ErgoFit™ Technology is the gateway to cross training.

Anatomically precise finger holds with declining body thickness result in a fit and feel similarity across our entire line while leaving just enough changes to keep you from anticipating the shot.

Feeling the jitters? Put the SX3 down and pick up a BlackJack. Are gusty winds interfering with your use of a hinge? Put it in your pouch and pull out a trigger or better still an Element resistance activated release. The fit and feel provide you with a familiarity that won't take you out of your groove, yet the different mechanisms are sure to give you a level of control never before possible.

Five reasons to choose a Stanislawski® release aid

1. No release on the market is as crisp, comfortable, or as reliable as a STAN®. None.
2. All of our searing mechanisms are made from enhanced and hardened 440C stainless steel then finished with our proprietary polishing process. There is nothing as tough, reliable, or silky smooth as a STAN®.
3. ErgoFIT™ cross training technology is standard across all STAN® release aids. Each one is unique, yet all have a similar fit and feel. Multiple sizes and configurations offer archers the perfect fit. Handles come in medium or large, three or four fingers, and mild or aggressive sweep patterns.
4. Stanislawski® Archery Products is always at the forefront. Whether it be form, fit, finish, or function. From the silky smooth cocking mechanism to Innovative features like our Trainer Lock™ pin, nothing beats a STAN®.
5. All STAN® release aids are made in the USA. In fact, the only thing not from the great state of New York is the anodizing which is done in Pennsylvania.

Just X sears

Trigger Releases

The Just X sears were designed for those archers looking to squeeze every last ounce of speed out of their setup. Their compact size allows for handles with shorter neck designs which are ideal for shooting with today's more common shorter axle to axle hunting bows. Perhaps the coolest feature is that the mechanism is always set to zero trigger travel for an ULTRA crisp release.

Just X sears are made of enhanced 440C stainless steel then hardened to 60 Rockwell and finished with our proprietary polishing process. They're designed to offer the same greasy smooth

functionality as their predecessor all in smaller, melt in your hand handle designs.

The first release series to use these sears are their namesake. The Just X series offers a complete range of handle sizes that cover small, medium, large, and extra large hands as well as three and four finger configurations. What's more, the Just X comes with a removable nose piece so you can shoot it in both open or closed hook configurations.

SMALL	<del>X</del> travagant	<del>X</del> quisite
MEDIUM	<del>X</del> traordinary	<del>X</del> clusive
LARGE	<del>X</del> ceptional	<del>X</del> static
X-LARGE	<del>X</del> act	<del>X</del> treme

*silkpath* sears

# STAN

S T A N I S L A W S K I

Like the name implies, *silkpath*™ sears are silky smooth yet their enhanced and hardened 440C stainless steel construction makes them brutally tough.

They're finished with our proprietary polishing process and set in place by experienced craftsmen to ensure years of reliable service.

The hallmark of *silkpath*™ sears is their infinite adjustability. They offer a wide range of trigger travel and tension adjustability without having to fumble with changing any springs.

Both the SX3 and the all NEW shootoff! *TL* models are built around our *silkpath*™ sears and come in both medium and large sizes as well as three and four finger configurations.

The new shootoff! *TL* incorporates the company's patented Trainer Lock™ technology and retains the deeper handle sweep for a melt in your hand feel.

MORE  sears

STAN's® MOREX™ sears are the most advanced hinge based sears on the market offering an unmatched level of precision in the market pioneered by our namesake. The micro adjustable mechanism and two available clicker speeds (sold separately) make this the perfect backtension release for beginners and professionals alike.

Named after the sears themselves, the first release using them is the MOREX. It comes in both medium or large sizes and two, three, four, deep swept four, and straight handle configurations. Like all STAN's®, it offers a fit and feel you won't forget through features like the removable pulling post that's fully adjustable for projection and angle.

Our patent pending Trainer Lock™ technology comes standard in the MOREX release line and offers a threaded hole in the handle to store the training pin. For those of you who still prefer a rope, the MOREX has a recess in the hinge to install a rope.

Resistance Releases

Resistance style releases operate by setting the release weight to your holding weight plus some differential. Once at full draw, activate the release, then add that differential weight and the release will fire.

It's a simpler way to shoot using backtension because there is no rotation involved, just squeeze with your back and it will fire. But resistance style release aids are the most difficult to design AND manufacture; succeeding here is what sets a premium manufacturer apart from the pack.

Like anything worth having, STAN's® Smokin' X™ sears were a long time coming. Theory alone will not result in a design that is repeatable. Only painstaking craftsmanship and revision after revision will get you there.

The Element<sup>TL</sup> is the second in STAN's® lineup to use the Smokin' X™ sears; this year we added our patented Trainer Lock™ feature and switched to a sweet new gold color.

Whether you're shooting a light draw weight for indoors or a heavy 3D setup, the Element<sup>TL</sup> offers extreme repeatability with the reliability and consistency you can only find in a STAN®.

Comes in three or four finger / medium or large configurations
