

R E F U S E T O F O L L O W

2016 CATALOG

A hand is shown holding a compound bow. The bow is equipped with a scope, a stabilizer, and other accessories. The background is dark and textured, suggesting a forest or outdoor setting. The text is overlaid on the right side of the image.

OUR INNOVATIONS ARE MORE THAN
WIDGETS WITH A FANCY NAME OR LOGO.
WE PROVIDE TECHNOLOGIES
THAT YOU CAN **TOUCH, FEEL, AND *EXPERIENCE.***

**WE EXIST FOR
THOSE WHO
*REFUSE TO FOLLOW...***

INNOVATIONS

When you see our technologies, you know you are buying a genuine product from the original developers; those who know it best. Why buy an imitation when you can have the original?

Precise simplified tuning

A revolutionary enhancement in PowerShift Technology. The Micro Sync Dial gives the shooter the ability to precisely time cam position without sacrificing wasted time in a bow press. Featuring 10 micro dial adjustments allowing for fast and efficient cam synchronization.

Uncompromising versatility, personalized draw

Technology made simple. Bowtech's patent pending PowerShift Technology delivers versatility unmatched by any compound bow on the market today. A simple adjustment of the PowerShift disc allows the shooter to customize the draw cycle to adapt to their shooting style.

POWERDISC³ FLIPDISC² PERFORMANCE = maximum speed and power

POWERDISC³ CLASSIC = A smooth draw and plenty of power

POWERDISC³ FLIPDISC² COMFORT = an effortless draw

Unsurpassed accuracy, tunability, and speed

The Overdrive Binary Cam achieves the highest levels of tuning and consistency by combining all the best possible attributes in a cam system; Symmetry, Synchronization, and Stability. A 100% tunable system that maximizes cam stability while maintaining perfect synchronization for unmatched accuracy.

Simple tuning, perfect synchronization

The most accurate and sought after cam system on the market today. The Binary Cam System is comprised of two perfectly symmetrical cams that are slaved to each other, forcing the cams to turn in perfect synchronization. This provides for flawless nock travel and tuning that you can set and forget, maximizing accuracy and consistency.

Deadly quiet, vibration free and unmatched balance

Center Pivot Extreme redefines balance and stability on a torque and vibration free platform. The CPX riser refuses to be twisted and forces the string to be in perfect alignment. By pure design CPX risers create a steady and smooth draw resulting in the cleanest and most accurate shot possible. With CPX... Accuracy is built in.

Terminates riser torque for extreme accuracy

The FLX-Guard™ cable containment system allows for flawless execution in terminating riser torque. The FLX-Guard™ responds by flexing inward, absorbing the cable guard torque that would have otherwise been transferred to the riser, resulting in a substantial reduction in lateral nock travel and allowing for tenability, forgiveness, and accuracy.

Minimal weight, maximum strength

Quality and Strength matters. Military, Automotive, and Aerospace engineers all turn to the same carbon compound used to produce the Knight Riser. The Knight Riser has achieved maximum strength while maintaining minimal weight, providing the most ultra-light premium bow offered on the market.

Impact-resistant, Intense Efficiency

The use of Carbon Core limb technology maximizes durability and significantly increases efficiencies over conventional limbs. The result is more energy and speed down range, for hard hitting knock down power.

The most accurate preset components

Attention to detail is our way of life, especially when it comes to outfitting our R.A.K. equipped bows. We don't just throw a bunch of random parts in a box and call it good, we factory install and test the most accurate preset components in the industry so each R.A.K. bow will have you on paper at 20 yards, out of the box. Less time on the range, equals more time in the field.

BT-X™

BT-X is the perfect combination of speed, balance, and strength in an ultra-compact design. Generating bone-crushing speed at 350 (28" cam system) and 350 (31" cam system) fps. The revolutionary skeletal riser was specifically engineered to remove unwanted weight for optimal balance and reinforced stability. The BT-X features the all-new Micro Sync Dial, giving the shooter the ability to precisely time cam position without sacrificing wasted time in a bow press. **#BT-X**
