# BOW TECHNOLOGY

From research and design to material testing, development and production, we improve the quality of our bows with each range we create.

Experienced and passionate professionals with a scientific approach, developing specialised technology to make the world's best carbon products.

Archers have high expectations of Win&Win. We only want to raise them. That is why we engineer innovation and optimise manufacturing processes.

## CARBON STABILITY

Compound archers strive for higher arrow speeds, but this results in increased vibrations in the bow. Up until now, the use of aluminium has not been able to effectively deal with this.

Win&Win specifically designed its range of premium carbon compound bows to address this issue. Our carbon risers improve dampening, absorb shock and help control torque during shooting.

Win&Win Black bows combine the best quality modern carbon materials with high-tech tooling and efficient molding methods. Our engineers had in mind to deliver the best equipment with the minimal weight in your hand.

## HURRICANE CARBON RISER

The Hurricane C6 is designed to stay straight and stable, minimising torque through the bow during shooting. Its multi-axial carbon pattern prevents riser and limbs from twisting and reduces unnecessary movement as an arrow is shot. This special carbon pattern also helps absorb vibration and shock quickly.

## NANO CARBON TECHNOLOGY

Carbon nano-materials - carbon nanotube and graphite nanofiber - are true 21st century materials.

They can be made as small as 1/10,000th of a human hair, and have superior mechanical, chemical, physical and magnetic properties.

High-tech engineering creates the best carbon material mixture for WIN&WIN bows, improving product quality and gaining archers' confidence.

Scientists believe nano-materials are the building blocks for the next generation of engineering.

## DUAL RF SHOCK STOPPER

WIN&WIN new Dual RF Shock Stopper is made from an absorbent rubber material called Sorbaflex that nearly eliminates vibration and controls poor string movement as the arrow is shot. This is the most efficient small anti-vibration device for your compound bow!

## EVOLUTION BEYOND IMAGINATION

Made from pure carbon, Win&Win's Hurricane C6 represent the pinnacle of nano carbon technology.

The Hurricane C6 is the perfect bow for hunting. Featuring an incredible arrow speed of 320+ and a brace height of 6.75", you will make the experience of a light as well as a forgiving compound bow.

The Hurricane C6 comes with the center sync cam system especially developed by Win&Win that will allow you a fine setup of your bow without even using a press.

Available draw lengths start from 26 to 30 inches and draw weights up to 70#. This versatile bow is the perfect choice for any serious hunter.

### POSI-LOCK LIMB POCKET

Posi-lock limb pocket system ensures a perfect limb alignment while shooting. You can now setup your bow by using only one allen wrench. Tuning up your bow has never been so fast and so easy, without the use of a bow press!

### SHOCK SUPPRESSORS

Your shooting experience has never been so smooth and so powerful with the help of our new shock suppressors!

## FULL ALUMINIUM HIGH PERFORMANCE

With a body entirely made of aluminium and also featuring parallel limbs, the Hurricane is a compound bow of an excellent value. It is perfect for archers who prefer the confident feel of metal when they pick up their bow. Especially developed for hunting and 3D archery, it comes with a speed of 320 FPS and a brace height of 6.75". Made from strong forged aluminum, the Hurricane is stylishly designed and structured to prevent lateral twisting, making it stable and comfortable to shoot with. Along with the brand new binary cam system, tuning up your bow has never been so fast so and so easy.

## THE POWER OF LIGHTNESS

Win&Win's SHADOW series gets all the benefits from our world famous recurve technology. Made to maximize the properties of carbon, SHADOW's riser minimizes unnecessary limb movement when an arrow is released. This makes shooting far more stable and efficient by lessening the wasted energy lost as vibration. SHADOW also features the upgraded TLI cam system for the best draw length choice.

## LIMBS POCKETS

Limb brackets are 6061 aluminium machined. Every bracket is made to ensure accuracy and stability shot after shot.

## TLI 2 CAM

TLI 2 CAM system is an upgraded version of TLI and features a fast draw length adjustment. Unlike most of cams 1/2, you won't need to switch for a new pair to set your draw length correctly. Set it and shoot! It's that easy.

## FROM GREAT START COME GREAT THINGS

Solid as a rock! Win&Win's Blast compound bow has all the benefits of an aluminum construction at an affordable price, the clean-cut shape of the economical BLAST is also contrasted by its stylish metal brackets. They provide a sturdy bed for limbs to sit in, and help dampen vibration throughout the riser. Thanks to its TLI 1 cam system, BLAST delivers impressive arrow speeds in an agile and forgiving package at a friendly price.

### BOW TECHNOLOGY

## FOR DIE HARD COMPETITORS

DRAGONFLY is a 38 inches bow engineered with the perfect balance between design and versatility. Fast enough for 3D or Target archery, it has the accuracy of the world's best bows. The DRAGONFLY wins its fans as soon as they feel their hand nestle into its well-shaped grip. Made from strong forged aluminum, our top-of-the-range compound bow will help you to soar to success anytime, anywhere you shoot with. It is stylishly designed and structured to prevent lateral twisting, making it stable and comfortable to shoot with.

# LEADING THE WAY IN RECURVE TECHNOLOGY

Win&Win Archery has the passion and experience that has maintained KOREA's archery dominance since the 1980s. Our staff aim for excellence with each Win&Win product they create.

We manufacture recurve bows for a world of champions, where every archer in every nation strives for perfection. A world of professionalism and power, born to win.

Black Wolf series makes no exception and gathers both Win&Win's heritage and experience in building recurve bows for hunting, without sacrificing maneuverability.
